

Solar Power Upgrade Kit KIT-10W™

Solar power upgrade kit for Dyacon MS-120 wired weather station configurations.

DATA SHEET

FEATURE SUMMARY

- 10 W 12 VDC solar panel module
- 1.5 m 2-wire cable, attached
- 2-position pluggable terminal block
- Solar panel bracket
- Pole/Surface mounting bracket
- 2 each 1.5" band clamps for pole mounting
- 7 to 8.5 Ah SLA battery
- Battery power wire assembly

DESCRIPTION

Solar Power Upgrade Kit, KIT-10W™ provides an upgrade option for purchasers of MS-120 weather stations. The kit includes everything required to add solar power to MS-120™, a cable-connected weather station configuration.

MS-120 uses the same CM-1 weather station controller as all other pre-configured systems. As such, it can be updated in the field to include any of the options of other systems.

KIT-10W can be installed in just a few minutes, converting a cable-connected weather station to a fully autonomous data logger.

Adding the cell phone upgrade kit further expands the capability of the system with wireless data functions.
